Foreword	vii
Preface	xi
I INTRODUCTION	1
1 What Is Computable Set Theory?	3
1.1 Tentative Subdivision of Computational Logic	5
1.2 One or Several Theories on Sets?	6
1.3 Computable Models of Aggregate Theories	8
1.4 Decidability Issues in Set Theory	9
1.5 Further Means of Automation for Reasoning on Aggregates	11
1.6 Application Scenarios for Computable Set Theory	12
2 Logical Background	14
2.1 Free Expressions over a Signature	16
2.2 Propositional Calculus	19
2.3 Predicate Calculus and Map calculus	28
2.4 Theories, in Various Formalisms	49

II	BASICS FOR SET-THEORETIC REASONING	59
3	Axiomatic Views of Aggregates	61
3.1	The Barest Rudiments of Set Theory	62
3.2	The Theory of Pure Finite Sets	66
3.3	Variant Axiomatizations of Aggregate Theories	77
4	Semantic Views of Aggregates	87
4.1	Universes of Finite (Nested) Aggregates	88
4.2	Computable Set Models	97
4.3	Appendix: Tiny-SETL Programs	108
5	Sets for Problem Solving	112
5.1	Conveniences Based on Notation	112
5.2	Set-Based Conceptual Tools	113
5.3	Abstract Characterization of Data Types	119
5.4	Problem Specifications	124
5.5	Specification of Algorithms and Problem Solution Techniques	128
5.6	Sets for Program Verification	130
5.7	Declarative Specification of a Problem Solution Technique	138
5.8	(*) Synthesis of Strongly Computable Set Models	142
6	Decision Problems and Some Solutions	148
6.1	Satisfiability and Validity	149
6.2	Unification Under Given Axioms	168
6.3	Taxonomy and Normalization of Formulas	179
6.4	Review of Solvable Fragments of Set Theory	190
7	Inference Techniques and Methods	196
7.1	Resolution-Like Inferential Systems	196
7.2	Semantic Tableaux	207
7.3	Logic Programming and Its Extensibility	223
III	DECISION METHODS	245
8	Set/Hyperset Unification Algorithms	247
8.1	Blind-Search Unification in Pure Context	248
8.2	Goal-Directed Set-Unification in the Blended Context	256
8.3	(*) Ingredients of Goal-Driven Hyperset Unification	259

9	(*) A Syllogistic Solitaire	265
9.1	Deciding a Fragment of Set Theory by Simulating a Partition	266
9.2	The Trace Theorem	269
9.3	Mimicking a Syllogistic Game by One of Predictable Length	275
9.4	Syllogistic Games Applied to the Set-Satisfiability Problem	281
10	Stratified Syllogistics	284
10.1	Two-Level Syllogistic	284
10.2	(*) Topological Two-Level Syllogistic	287
10.3	Three-Level Syllogistic with Singleton, Powerset, and Unionset	291
IV	SET-SPECIFIC INFERENCE ENGINES	305
11	Quantitative Set Reasoning	307
11.1	Case Study: Multilevel Syllogistic with a Cardinality Operator	307
11.2	A Further Extension of Multilevel Syllogistic, with Maps	313
11.3	Reduction of Multilevel Syllogistic to Propositional Calculus	314
12	Set Theory for Nonclassic Logics	318
12.1	Modal Logics	318
12.2	Translation of Propositional Modal Formulas into Set Terms	322
12.3	Eliciting Set Principles that Ensure Faithfulness of the Translation	326
12.4	Faithfulness of the Translation in Means of Proof	327
12.5	Set-Based Resolution for Nonclassic Logics	331
12.6	(*) Other Logics	335
13	Logic Programming with Sets	340
13.1	Axiomatic Description of the Blended Universe of Sets	341
13.2	A Variant of SLD-Resolution Specialized for Set-Handling	342
14	Syllogistic Tableaux	350
14.1	A Decidable Tableau Calculus for MLSS	351
14.2	Extending MLSS with Function Symbols and Restricted Quantification	361

References	374
Tables and Index of Symbols	393
Association and priority rules	393
Truth tables	393
Common abbreviations in first-order languages	394
Substitution-related notation	394
Map-related notation	395
Function-related notation	395
Basic laws on sets	396
Abbreviations in mathematical English	397
Index of Terms	399
